

## ACCESSORY (ACC) TERMINAL

For your convenience, your motorcycle is equipped with an accessory terminal, located behind the right side cover. The terminal provides 12V DC power for electrical accessories. A maximum of 60 watts (5 amps) may be connected to the terminal. Before installing any accessory, read Accessories and Modifications, page 7 .

If you install any electrical accessories, check the battery frequently to determine the state of charge. Higher current demands may blow a fuse or discharge the battery. For more information, see Battery, page 91 , and Fuses, page 96 .

Connect accessory electrical leads securely, and keep them insulated, away from hot parts and sharp edges.

(1) Accessory (ACC) terminal

Positive (+) terminal lead: light green and red

Negative (-) terminal lead: green
