

PARKING

1. After stopping the motorcycle, shift the transmission into neutral, turn the fuel valve OFF, turn the handlebar fully to left, turn the ignition switch OFF and remove the key.
2. Use the side stand to support the motorcycle while parked.

CAUTION:

- * *Park the motorcycle on firm, level ground to prevent it from falling over.*
3. Lock the steering to help prevent theft (page 38).

NOTE:

- * When stopping for a short time near traffic at night, the ignition switch may be turned to P and the key removed. This will turn on the taillight to make the motorcycle more visible to traffic. The battery will discharge if the ignition switch is left at P for too long.
